

MultiSight System Release March 2020

- **Enhancements**

- [Mobile App] - Updated iOS Mobile App for branding consistency
- [Mobile App] – Added support for iOS 13 user interface and API changes including support for the notch in newer iPhones.
- [Cloud Services] – Quicker availability of People Counting Report to ensure data is available for all sites in U.S. by 8 AM EST
- [Cloud Services] - Update to newer version of Java for regular system updates. [Cloud Services] - Migrated key components to newer AWS framework
- [Gateway] - Automatically resolve issues in which customer network MTU prevents gateway connecting to cloud at customer sites using CenturyLink ISP at install time to improve customer experience
- [Gateway] - Detect the camera DHCP failure problems and show on dashboard/console to alert Product Support for faster resolution.

- **Bug Fixes**

- [Mobile App] - Resolve several intermittent crashes on latest iOS due to concurrency bugs
- [Webview] - Fixed zoom issue on export video dialog box that prevented user from clicking "Save" on some small screens with certain aspect ratios
- [Webview] - Fixed paging bug in Library page preventing viewing of some exports
- [Webview] - Fixed issue wherein motion data was being shown for segments of time for which video had already been pruned
